

General Compliance Statement Printing Inks, Substrates & Laminates

All inks, substrates and laminates used by Magnet LLC, Innovations and Fusion (divs of the Magnet Group) are purchased through well established domestic suppliers. Each ink or raw material has been tested and runs below the new limits for lead and phthalates set forth by the CPSIA of 2008 which went into effect on 8/14/2009.

Inks used in the following processes were tested by Thermo Scientific in Billerica, MA:

- T-Print
- Digital
- Pad Print
- Silk Screen

Magnet substrates, paper and laminates used in the following processes were tested by Bureau Veritas in Buffalo, NY:

- Digital
- Offset
- Flexo

Since The Magnet Group offers products in a made-to-order environment each set cannot feasibly be tested for lead individually. Furthermore The Magnet Group cannot always determine if the intended audience is under the age of 12.

The Magnet Group makes this General Compliance Statement in good faith. If a CPSIA certificate is required for a specific batch or purchase order The Magnet Group can arrange testing at the customer's expense.
