- JPEG (minimum 300 dpi resolution)
- PDF (Press Quality)
- ZIP (compression file)
- Stuffit (compression file)

Microsoft electronic files generally are not acceptable as output for print production. However, black-and-white files can be output from a high-quality laser printer and then used as camera-ready artwork.

Camera-Ready Artwork

Camera-ready art is artwork that can be scanned without further preparation or changes. Halftones (screens) will not photograph well and should be avoided. We will accept camera-ready artwork that is already separated or that includes black line work (or key lines) to separate each color. "Camera-ready" art should be clean, black, and crisp on a smooth white background that requires little or no touch-up. (Original art or PMT 's are best.) Artwork must be submitted 1/4 of the finished printed size (for large prints) or large enough to fit on 8.5" x 11" page size. Please avoid submitting artwork that must be enlarged more than 400%. If appropriate quality or size specifications are not met, an art charge will apply. This will be determined once artwork is received.

The Following Artwork is Not Camera-Ready:

Drawings, letterhead, photocopies, business cards, faxes, and low resolution laser printed artwork that is not 1200 dpi are not considered camera ready artwork. (Recommendation: Black and white 1200 dpi laser prints at 200% larger than actual size to be imprinted).

Hard Copies

Hard copies are not required on every order; however on the hard copies we receive Benchmark® will review but will not proof against electronic art sent. Benchmark® offers several types of proofs that can be done if needed (additional charges may apply).

Art Charges

\$30.00 (c) per scan up to 8.5" x 11" size. For larger photos and transparencies/slides, call for quote.

Photo Scans

If art requirements are not met, art time will be billed at **\$40.00 (X) per hour**. Factory WILL NOT be responsible for charges due to "clean-up" or "rework" deemed necessary to meet production standards.

Typesetting

We will typeset up to 3 lines for FREE. All other typesetting (including copy changes) will be billed as needed at **\$40.00 (X) per hour**. The typestyle must be indicated, or it will be left to the discretion of the typesetter. Charges less than \$40.00 will be processed without notification.

Colors

- All RGB colors must be converted to CMYK for four-color process production.
- Metallic, fluorescent, and PMS colors are not available on four color process imprints.

Type Size

- Minimum type size: This will vary by method.
- Small registers/trademarks with fine lines may appear as a dot on product.

Serif and Condensed Fonts

- Please avoid using fine serif fonts. These fonts are usually too thin and fill in or lose detail in the printing process.

Line Thickness

- Minimum line thickness: .7 point.

Helpful Hints

- EPS (Encapsulated PostScript) file format is used to transfer PostScript image information from one program to another. The file includes PostScript code plus a low-resolution representation of the image. Logos, illustrations and graphics that will be color separated should be saved as EPS files.
- TIFF (Tag Image File Format) is a widely used file format for exchanging bitmapped images (usually scans) between applications. Black and white line art or grayscale images should be saved as TIFF files.
- Please submit TIFF files as a layered document, in case last minute modifications are required.
- Always provide a list of fonts used within a document. This allows output technicians to download the appropriate fonts to their image setter or output device. Remember to list all fonts used with imported illustrations, or the output device may substitute a different font.
- When supplying PostScript fonts with a job, be sure to supply the printer fonts (also called outline fonts) and screen fonts (bitmap fonts). Both must be available for proper output.
- When supplying fonts, be sure to supply those used in the creation of EPS files. (They will not show up in your page makeup application on the list of fonts used.)
- Specify fonts and their style (bold or italic, for example) by using the long menus in your publishing program rather than selecting bold or italic by clicking on a style bar. The menu selection will give you a more accurate representation of the font and style desired. On the Mac platform, clicking on the style bar allows you to select styles for which fonts don't actually exist.
- Limit the number of fonts used in each job.
- Avoid using fine serif fonts. These fonts are usually too thin and fill in or lose detail in the printing process.
- Avoid saving EPS files within EPS files. Avoid transparencies and Illustrator filters to create shadows they convert to low resolution files.

We support the **sm@rt** program to improve artwork readiness. We accept artwork prepared by these standards. Please visit the website www.smart-artwork.com for more information.

ARTWORK STORAGE

Artwork will remain on file for 1 year. You must resubmit art after that time.
